TECHNICAL SKILLS

AI & Agents: Vercel AI SDK, Mastra, eve, OpenRouter, MCP, agent plugins, agent evals, cost instrumentation

Languages & Runtimes: TypeScript, Python, Elixir, SQL, Node.js, Bun

Frameworks & Libraries: Next.js, React, FastAPI, tRPC, Phoenix, Express.js, Tailwind

Data: PostgreSQL, Redis, Prisma, Ecto, Supabase, SQLite, MongoDB

Platforms & Infrastructure: Azure, AWS, Docker, Vercel, NGINX, GitHub Actions, Quickbase

PROJECTS

Gabagool Bench | *LLM benchmark measuring how 40+ models resolve morally ambiguous decisions* Dec 2025

- Built an evaluation harness in **TypeScript** & **Bun** running **40+** models through a single **OpenRouter** endpoint via the **AI SDK**, normalizing provider differences behind one request path.
- Designed the benchmark around **forced tool-calling** rather than free-text output, constraining every model to one of six discrete actions across 12 scenarios, then aggregated results into behavioral “fingerprints” quantifying escalation, negotiation, and inaction.

ISP Watchdog | *IoT diagnostics tool that monitors network performance and reports outage root causes* May 2025

- Built a fault-tolerant, self-recovering diagnostics tool in **Elixir/OTP** (GenServer, Supervisor) running **MTR** and **ICMP** probes, tracking outage state via **Ecto** and **SQLite**, inferring root causes from multi-hop analysis, and shipping through **Docker** to headless **Raspberry Pi** edge devices.

EXPERIENCE

Agent Engineer Jun 2026 – Present
Rotolo Consultants, Inc. Slidell, Louisiana

- Lead AI implementation at a **\$140M** commercial landscaping enterprise, running production agents across sales, marketing, and internal IT. Advanced from Business Application Specialist to Software Engineer to Agent Engineer in under a year.
- Own the bid-to-proposal platform end to end: **FastAPI** on **Azure**, **PostgreSQL**, a customer-facing **Next.js** portal, and outbound campaign email with agentic voice calling.
- Built an autonomous lead-generation agent (**TypeScript**, **eve** agent framework) replacing a 13k-line **Mastra** workflow with one orchestrator that delegates stages to fresh copies of itself across 11 domain skill modules, with deterministic guardrails confined to trust boundaries; drives cold outreach at a **2% positive-reply rate** and a **2% bounce rate**.
- Built the **evaluation** loop that keeps the agent honest: no result saves until a fresh-context adversarial pass fails to beat it, every run emits structured eval records, and a review agent grades the prior cycle’s prompt edits against them and opens evidence-cited PRs.
- Instrumented per-run **LLM and third-party API cost attribution**, metering exact token spend off the runtime event stream down to a landed unit cost of **\$0.60 per verified, deliverable email address**.

Agent Engineer Mar 2026 – Jun 2026
Civilized AI Remote

- Recruited for agent-tooling expertise; trained engineering and non-technical teams on agent-driven development.
- Built the company’s internal agent plugin, shipped across **Claude Code** and **Codex**, enabling non-engineers to contribute to production codebases and automating **E2E QA**.

Software Engineer Jul 2025 – Mar 2026
Rotolo Consultants, Inc. Slidell, Louisiana

- Architected the company’s first agentic AI workflows (**Mastra**, **OpenRouter**, **AI SDK**) and led a custom internal admin platform in **Next.js** and **tRPC** on **PostgreSQL**, deployed to a standalone **VPS** behind **NGINX**.
- Migrated manual Excel workflows from multiple departments into **Quickbase**, then drove the move to custom **React/TypeScript** tooling as low-code hit its limits.

EDUCATION

Operation Spark March 2025
Software Development Immersion — 700-hour full-time program, Hack Reactor curriculum New Orleans, Louisiana

Loyola University New Orleans 2016 – 2017
Coursework in Music Industry Studies New Orleans, Louisiana
